THE COMPANY

Watchdata Technologies is a recognized pioneer in digital authentication and transaction security for over 20 years. The company founded in Beijing has now 11 regional offices and provide daily services up to billion of customers over 50 countries. Today, the international headquarters located in Singapore oversee manufacturing security chips of credit cards, EZ-link cards and SIM cards to be sold to neighboring countries.

CHALLENGES

Watchdata Technologies major difficulty faced with previous antivirus solution was their incompatibility with the IBM configuration management solution. “Kaspersky was unable to support IBM ClearCase software but yet ESET is able to do it,” says Vasanthan.

IMPLEMENTING ESET

Personally Vasanthan is already an avid ESET user at home. The IT Manager first encounter of ESET was from a technology show years ago. He read many good reviews on the Internet that gave him confidence in ESET. Since Watchdata Technologies was looking for a change, Vasanthan decided to switch to ESET Endpoint Antivirus.

THE RESULT

“Overall ESET performance is good with low system foot print and has comprehensive coverage, I’m truly satisfied. My favorite ESET feature is the pushing off configuration great for weekly and daily scans.” says Vasanthan. Vasanthan said if another IT manager is considering ESET, for sure they will experience efficient antivirus system which does not slow down the system. Furthermore ESET is averagely priced and competitively affordable.
